

The Electrical Shop is responsible for the installation, repair, and maintenance of all College electrical systems. These include the building electrical, lighting, emergency, and fire safety systems as well as fire and security alarms, elevators, and lifts. We also perform a considerable amount of installation work. The installations are most often new circuits and lighting related to in-house renovation projects or similar individual requests. We also install circuits in support of new equipment and equipment replacement. The Electrical Shop is involved in finding new and creative ways to make the campus more sustainable.
